	because of the frequent bottlenecks and the spiraling needs of the mining industry. For these same reasons, the calcium carbide shortage will not be alleviated in the near future. There was also a shortage of formic acid, because of the plant's	25X1
	There was also a shortage of formite acid, because was so extreme limited production capacity for it. The shortage was so extreme that formic acid had to be replaced by imported acetic acid. However, since production in the textile industry. the main consumer of formic acid, was being steadily reduced, shortage of formic acid will not last very long.	25X1
4.	the plant had adequate rail transportation facilities  Solid products, particularly calcium	25X1
	carbide, were shipped in paper or linen sacks; acids were shipped mainly in tank cars, but also in carboys. The factory supplied its own power	.25 <b>X</b> 1
	worked, whenever the plant administration could arrange lead shifts. Among the workers were a large number of Czechs and Slovaks who had reemigrated from Rumania in 1947 and had settled in neighboring villages which had been abandoned by the Sudeten Germans these people had very low living and cultural standards.	;
5.	The general manager was a 33-year-old engineer, (fnu) PETOUTKA, who has been a member of the Communist Party since 1946. He had formerly been chief secretary to the General Director of the Czechoslovak Chemical Works (the predecessor of the Ministry of Chemical Industry) and, simultaneously, head of the Communist organization in the Czechoslovak Chemical Works.	25 <b>X</b> 1
	The chief engineer was (fnu) CERNY	

## Urxovy Works

6. Located in Ostrava not far from the airfield, Urxovy Works, formerly known as the Rutgers Works, was a fairly modern plant built in the 1920's and partly reconstructed and expanded after World War II.

Plans for further expansion were under consideration

Tar and tar derivatives were its

25X1

principal products

its production of phenol and cresol was very slight.

25X1 25X1 25X1

its production capacity was not great enough for the demands made on its products. Approximately 3,000 workers were employed at the plant, but a shortage of manpower often prevented operation in three shifts. Railroad facilities were adequate, with spur tracks leading alongside the various buildings.

38.

as the administrative deputy when the latter was dismissed in the 25X1 last part of 1951.

#### Jodasta Chemical Works

7. This plant
Kaznejov /4953N-1324E/, about 15 km. north of Pilsen. Founded in 25X1
about 1910 and not recently expanded, this plant was quite small.
Prior to World War II it was a part of the trust of David Stark
Sons, Ltd., which in turn belonged to the Petschek Concern. Among
its products were citric acid, tartaric acid, aluminum and chromium
alums, and very small quantities of sulphuric acid.

25X1

### SECRET/SECURITY INFORMATION 25X1 the plant had great difficulties in securing workers because most of the manpower in the region of Pilsen was 25X1 not know the name of the 25X1 absorbed by the Pilson V.I. Lenin Works. The former new plant director plant manager, Dr. (fnu) SCHWEIDER, an engineer was dismissed 25X1 Kelin Chemical Works 25X1 was situated in the outskirts 8. this plant, of Kelin /5002N-1512E/, on the main road to Prague. It was quite an eld plant which was constructed in the first part of this century. 25X1 it has not been expanded and no plans for expansion were under consideration. Its principal products were sulphuric acid. hydrochloric acid. and carbon disulphide 25X1 Prerov Chemical Works was located near Preroy 25X1 it was very old and antiquated. It will undoubtedly be entirely closed down in the near future. it produced some sulphuris acid.
